Professional Summary

React Native and React developer with 1.5+ years shipping production mobile and web apps, including a full-stack NFC attendance system deployed across multiple company facilities. Currently own frontend development on a mobile healthcare records app (MDR) at a service company, with a self-directed personal project (Own-It) in testing. Comfortable picking up unfamiliar codebases and working independently.

Professional Experience

Software Developer | Arthtech Supports — March 2026 – Present

MDR (MyDigiRecords) — React Native 0.83.4

- Took ownership of an existing production React Native app via knowledge transfer after the prior developer left
- Fixed a production Android crash (Fragment\$InstantiationException) affecting live users
- Implemented multi-device session management, including authentication failure monitoring and notification tap handling
- Own incremental feature development and frontend bug resolution on the app

Software Developer | Vision Vivante — Dec 2024 – Jan 2026

NFC-Based Employee Time Tracking System (shipped)

- Built and shipped a production NFC attendance app in React Native, deployed across multiple company facilities
- Owned frontend, API integration, and built two native modules for an OS-independent clock system to prevent device time manipulation

Additional Projects — Hotel Booking Platform, Gaming App, Agri Social Platform

- Built frontend to 70–80% completion across three additional products (hotel booking, gaming app, agri social platform) in a fast-moving, under-resourced environment; owned full-stack development independently on the gaming app

Freelance Web Developer | Self-Employed — 2026 – Present

- Building a client website using Next.js and Sanity.io as a headless CMS, handling requirements, design implementation, and content modeling directly with the client

Personal Projects

Own-It — React Native / Expo (in testing)

- Building a minimal daily-accountability app: single yes/no habit question, forgiving streak system, GitHub-style heatmap
- SQLite-based local persistence, structured sprint development tracked in Jira

Library Management SaaS (early stage)

- Early-stage MVP for library owners to manage enrollments; Stripe billing and PostgreSQL schema in progress

Technical Skills

Frontend & Mobile: React, React Native, Next.js, Expo, TypeScript, Redux Saga, Tailwind CSS

Backend & Database: Node.js, REST APIs, PostgreSQL, SQLite · CMS: Sanity.io

Tools & Workflow: Git, GitHub, Jira, Figma, Notion

Education

MCA & BCA, Lovely Professional University — 2019–2024
